

MEMBER BENEFIT

Silica Sampling & Objective Data Program

If OSHA's "Table One" does not cover the task, contractors MUST determine exposure by either:

- Sampling—which is VERY expensive
- Using "Objective Data"—industry wide data doesn't exist yet

Silica Sampling & Objective Data Program is the **SOLUTION!**

This program saves contractors thousands on silica sampling while simultaneously building a searchable database for the construction industry. Participating contractors can rely on the database in the future when managing employee safety and multiple-contractor activities where job tasks produce respirable silica emissions.

As a member benefit, the Nebraska Building Chapter has purchase an annual subscription that allows up **50 Chapter Members** to participate in this [program](#). ***This represents a \$500 savings over an individual company subscription.***

Program Benefits:

- Discounted [sampling supplies](#) & [lab services](#).
- Data to assist members to develop & implement silica exposure plans.
- Allows members to evaluate samples to determine employee exposure using ***Performance Option*** of new ***Silica Standards***.
- Employer controlled objective database.
- Provides a shared database of sampling results for program participants.
